

Lochan Pranav Mohanasundar

Brooklyn, NY | +1 (929) 674-8035 | lm5677@nyu.edu | lochanpranav.com
linkedin.com/in/lochanpranav | github.com/lochanpranav | behance.net/lochanpranav

Spatial data scientist and product designer. Part-time now; summer 2027 internships; full-time from June 2027.

Education

New York University, Tandon School of Engineering

M.S. Urban Data Science, Center for Urban Science and Progress (CUSP). GPA 3.77 / 4.0

Honors: CUSP Rising Scholar Scholarship for academic performance; NYU CUSP Scholarship

Coursework: GIS; Urban Spatial Analytics; Machine Learning for Cities; Applied Data Science

Expected May 2027

Brooklyn, NY

MIT World Peace University

Bachelor of Design (B.Des), Product Design. GPA 9.0 / 10

Jun 2020 to Jun 2024

Pune, India

Skills

GIS: ArcGIS Pro (Spatial Analyst, Network Analyst, Location-Allocation, hot spot analysis), ArcGIS Online, StoryMaps

Data and code: Python (pandas, NumPy, scikit-learn), SQL, R, Streamlit, REST APIs (Google Places, Eventbrite), Git

Product and UX: Figma, prototyping, usability testing, design systems, UX research, information architecture

Visual and industrial: Photoshop, Illustrator, photography, video editing, Rhino, Fusion 360, SolidWorks, KeyShot

Certifications: Google UX Design (2024); Esri ArcGIS Pro: Fundamentals of GIS

Languages: English, Hindi, Tamil, Japanese

Experience

Graduate Research Assistant

City of Tulsa Auditor's Office, through NYU CUSP

Aug 2025 to Dec 2025

Tulsa, OK, hybrid

- Built the Event Monitor with one teammate, a Streamlit app in Python mapping Eventbrite, Facebook and LinkedIn events onto 493 geocoded venues, and led its UX from user research to Figma prototypes; the office now owns it.
- Analyzed geospatial and demographic data to identify the neighborhoods the office was missing, and wrote case studies of the Austin, Oakland, Denver, San Diego and Portland city auditors.
- Presented recommendations to cross-functional city stakeholders and delivered the final report in Dec 2025, from a mixed-methods study of the office's social media engagement and audit plans and of community events.

Graphic Designer (Product & UX Design)

Address Masters, early-stage real estate startup

Jan 2024 to Jun 2024

Bangalore, India

- Designed 12+ end-to-end product workflows and 40+ high-fidelity UI screens in Figma for an AI-driven analytics dashboard, and partnered with engineers to translate the prototypes into production-ready interfaces.
- Ran usability tests with 18 users and iterated on the findings, improving task efficiency by 32%.
- Built a reusable component library that cut design iteration time by 25% and improved consistency across the product.
- Produced 200+ marketing creatives across social, digital and print for two Bangalore developments and shot and edited two campaign films; the campaigns generated 1,000+ qualified buyer inquiries.

Projects

Left Behind by Electrification (MTA buses). ArcGIS Pro, StoryMaps; pair project

Urban Spatial Analytics, Spring 2026

- Sited five charging stations on shared corridors for the most constrained Manhattan and Bronx routes: slope from the 1-foot elevation model, GTFS mileage against a 150-mile range, Getis-Ord Gi* hot spots, then Location-Allocation.

Predicting NYC housing and transport burden. scikit-learn; group of three

Machine Learning for Cities, Spring 2026

- Engineered 30+ predictors for 2,120 tracts from HUD LAI, ACS and GTFS; the best of six cross-validated models (histogram gradient boosting) reached $R^2 = 0.710$ against 0.485 housing-only; flagged 148 tracts as "transit traps".

Sarathi Parivahan learner's licence portal redesign. Figma, Illustrator; solo

UX case study, 2022

- Redesigned India's learner's licence application from surveys, interviews and two personas: seven scattered steps became one guided flow with DigiLocker uploads, UPI payment and a progress bar.

SAVOR, a food surplus app. Figma; solo

Mobile app, 2024

- Designed an app where volunteers carry restaurant surplus to donation spots, from interviews with a restaurant, a canteen, a meat shop and a dairy and causal maps of how food becomes waste to final screens.
